# Why SBRT for oligorecurrent PC?

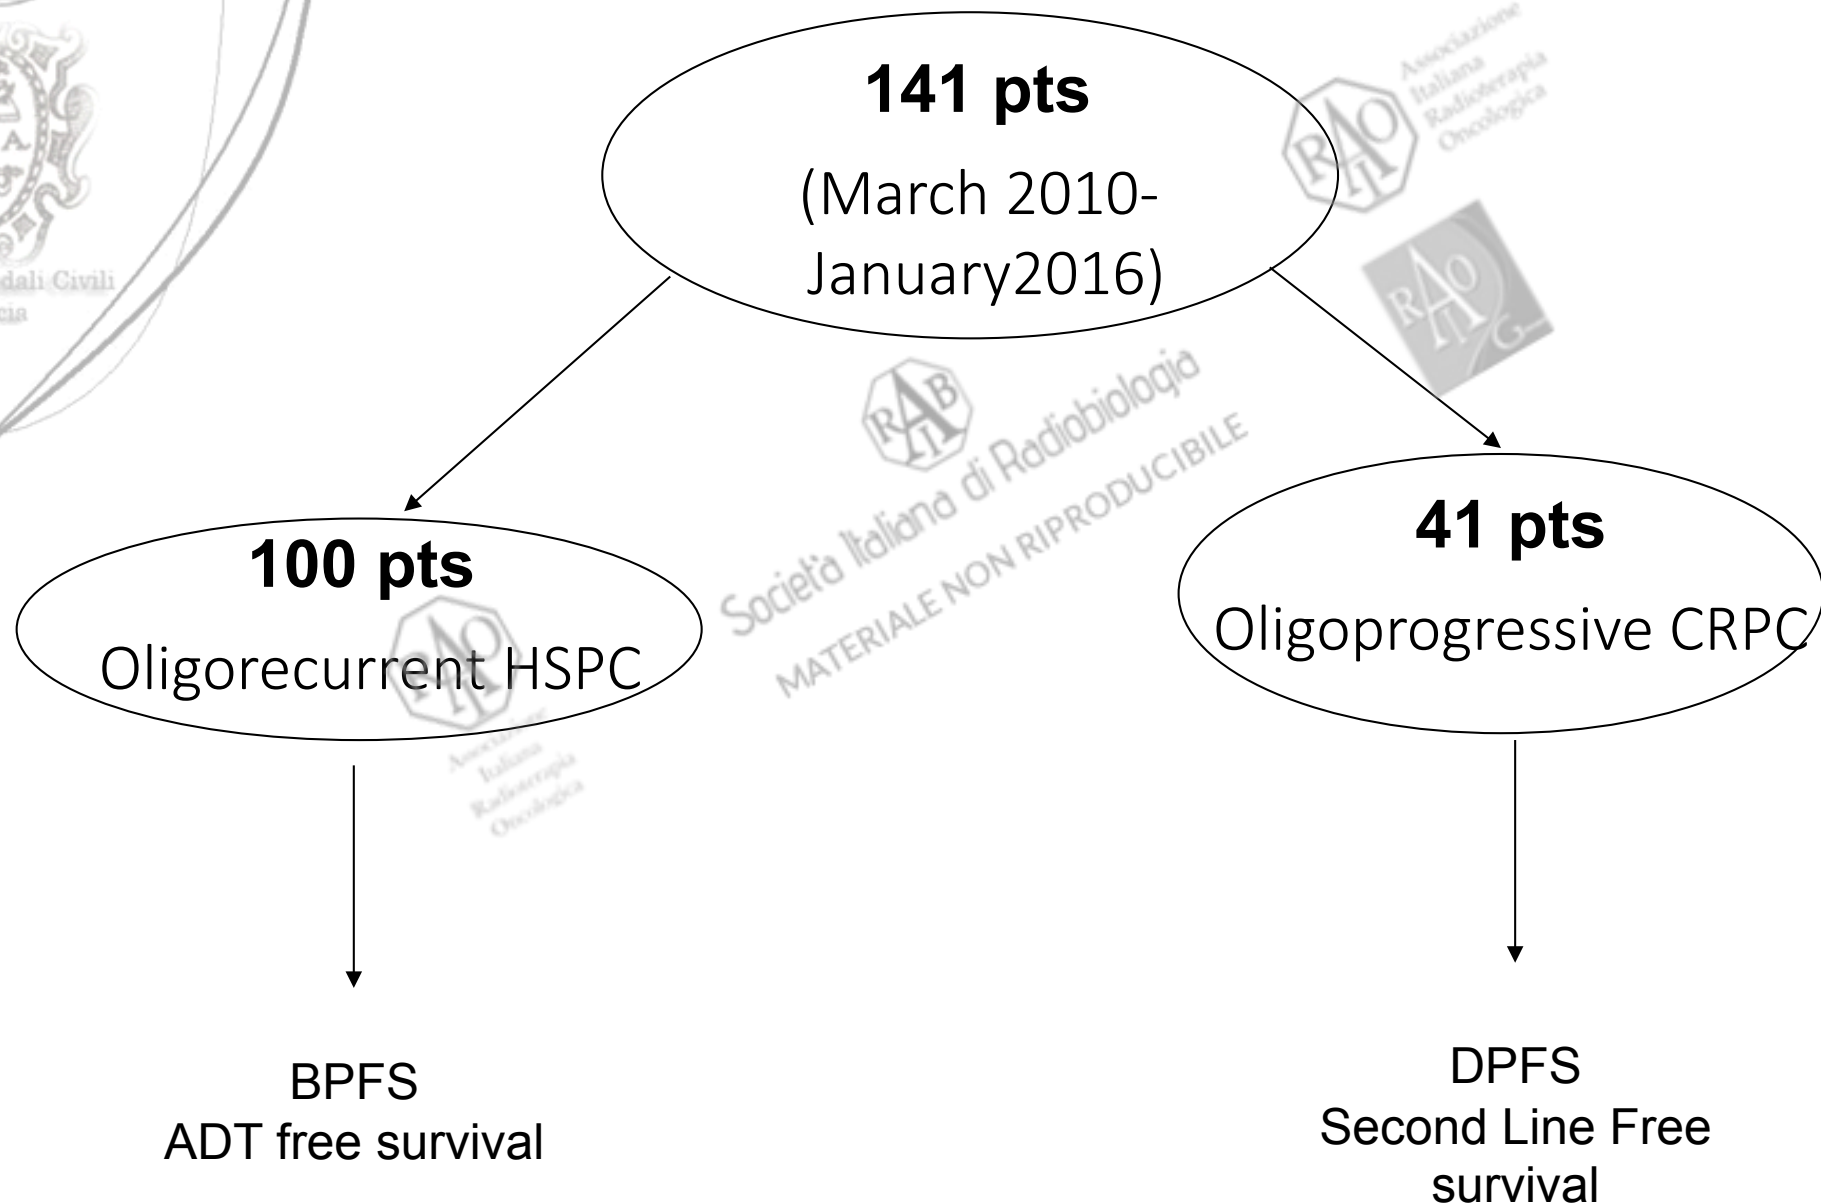

- ✓ Local curative Intent
- ✓ Low side effect
- ✓ Delay ADT/systemic therapies (second line)
- ✓ Local control  Systemic control?

# Oligorecurrent HSPC: characteristics (1)

Characteristic	All patient (n=100)
<u>D'Amico Risks :</u> <ul style="list-style-type: none"><li>- Low risk</li><li>- Intermediate risk</li><li>- High risk</li><li>- Very high</li></ul>	5 21 43 31
<u>Gleason Score:</u> <ul style="list-style-type: none"><li>- &lt; 7</li><li>- ≥ 7</li></ul>	15 85
<u>Primary Treatment:</u> <ul style="list-style-type: none"><li>- Surgery</li><li>- Surgery+EBRT</li><li>- EBRT/Brachitherapy</li></ul>	24 58 18
<u>ADT Adjuvant</u> <ul style="list-style-type: none"><li>-Yes</li><li>-No</li></ul>	38 62

## Oligorecurrent HSPC: characteristics (2)

Characteristic	All patient (n=100)
<u>Median Age</u> (years)	67
<u>Median Time to MTS</u> (month) (from primary treatment)	43,9
<u>Median PSA pre-SBRT</u> (ng/ml)	2,38
<u>Restaging</u> -PET Choline -TC/ Scintigraphy	96 4
<u>Site (%)</u> : -Node -Bone	84,2 15,8
<u>ADT with SBRT</u> -Yes (median 11 ms, mean 10 ms) -No	24 76

# Oligorecurrent HSPC: SBRT characteristics

Characteristic	All patient (n=100)
<u>Prophylactic Node irradiation</u> <ul style="list-style-type: none"><li>- Yes</li><li>- No</li></ul>	7 93
<u>Median BED (<math>\alpha/\beta= 3</math> Gy)</u>	116

# Oligorecurrent HSPC: Results (1)

Median Follow-up= 20,4 months

**BPFS**

BPFS (median)	15,2 ms
1 yr	58,1%
2yrs	38,3%
3yrs	17,9%

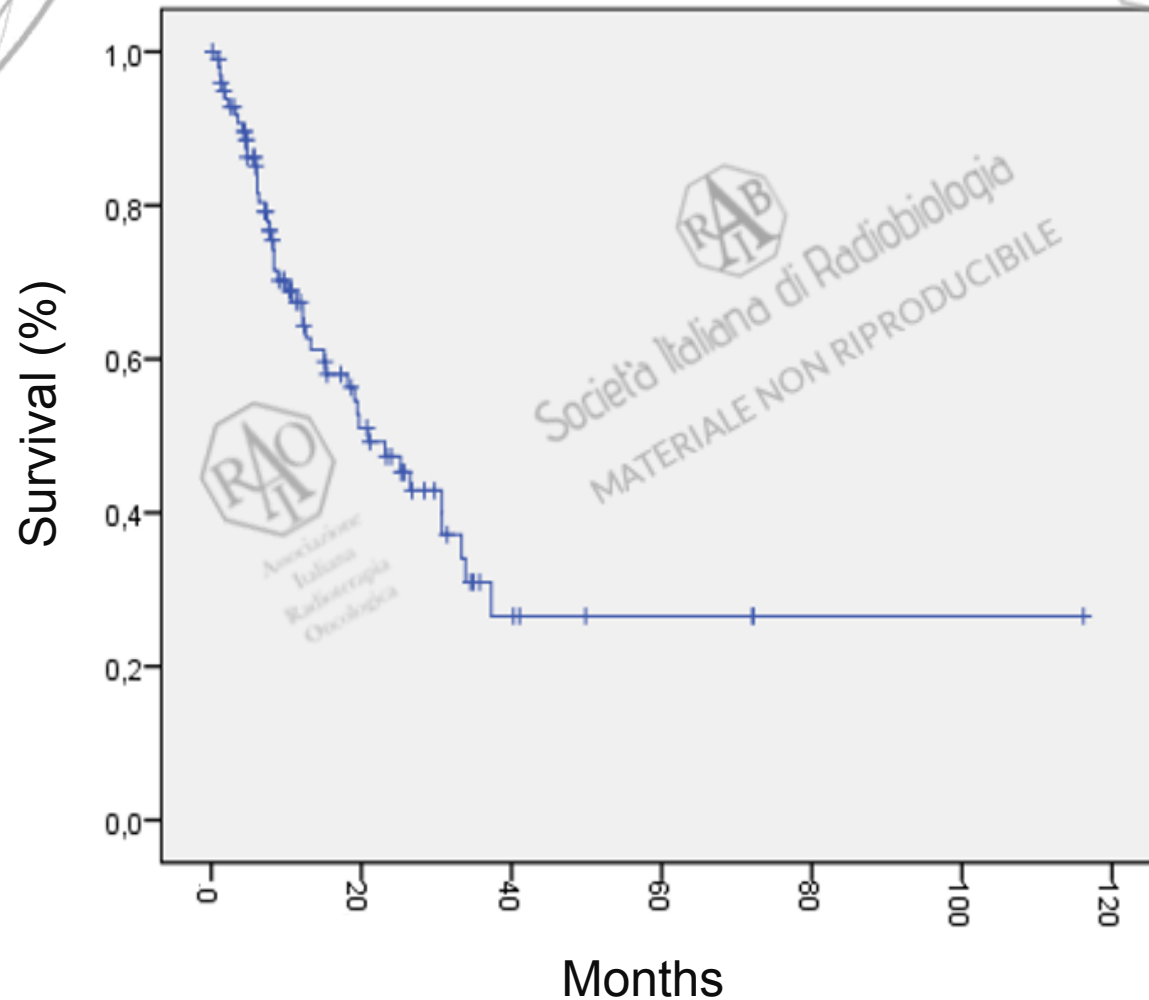

15 pts second SBRT

# Oligorecurrent HSPC: Results (2)

**ADT-FS**

Median Follow-up= 20,4 months

ADT-FS (median)	20,93 ms
1 yr	67,4%
2yrs	47,3%
3yrs	31,0%

# Oligorecurrent HSPC: Results (3): univariate analysis

## Prognostic factors:

- D'Amico Risks
- Gleason Score
- Primary site of mts
- n° of mts
- Interval from primary treatment
- Pre-SBRT PSA value
- Adjuvant ADT
- BED
- Prophylactic nodal irradiation
- PSA dt

# Oligoprogressive mCRPC : characteristics (1)

	ALL PTS (41)
<u>D'Amico Risks :</u> <ul style="list-style-type: none"><li>- Low risk</li><li>- Intermediate risk</li><li>- High risk</li><li>- Very high</li></ul>	0 6 16 19
<u>Gleason Score:</u> <ul style="list-style-type: none"><li>- &lt; 7</li><li>- ≥ 7</li></ul>	1 40
<u>Primary Treatment:</u> <ul style="list-style-type: none"><li>- Surgery</li><li>- Surgery+EBRT</li><li>- EBRT/Brachitherapy</li><li>- ADT</li></ul>	7 18 11 5

## Oligoprogressive mCRPC : characteristics (2)

Characteristic	All patient (n=41)
<u>Median Age</u> (years)	65
<u>Time to castrate resistant</u> (month) (from the start of palliative ADT)	37
<u>Median PSA pre-SBRT</u> (ng/ ml)	4
<u>Restaging</u> -PET Choline -TC/ Scintigrafy	38 3
<u>Site (%)</u> : -Node -Bone	70 30
<u>BED</u> (Gy):	116

# Oligoprogressive mCRPC: Results (1)

**DPFS**

Median Follow-up= 23,43 months

DPFS (median)	11 ms
1 yr	43,2%
2yrs	21,6%
3yrs	13,9%

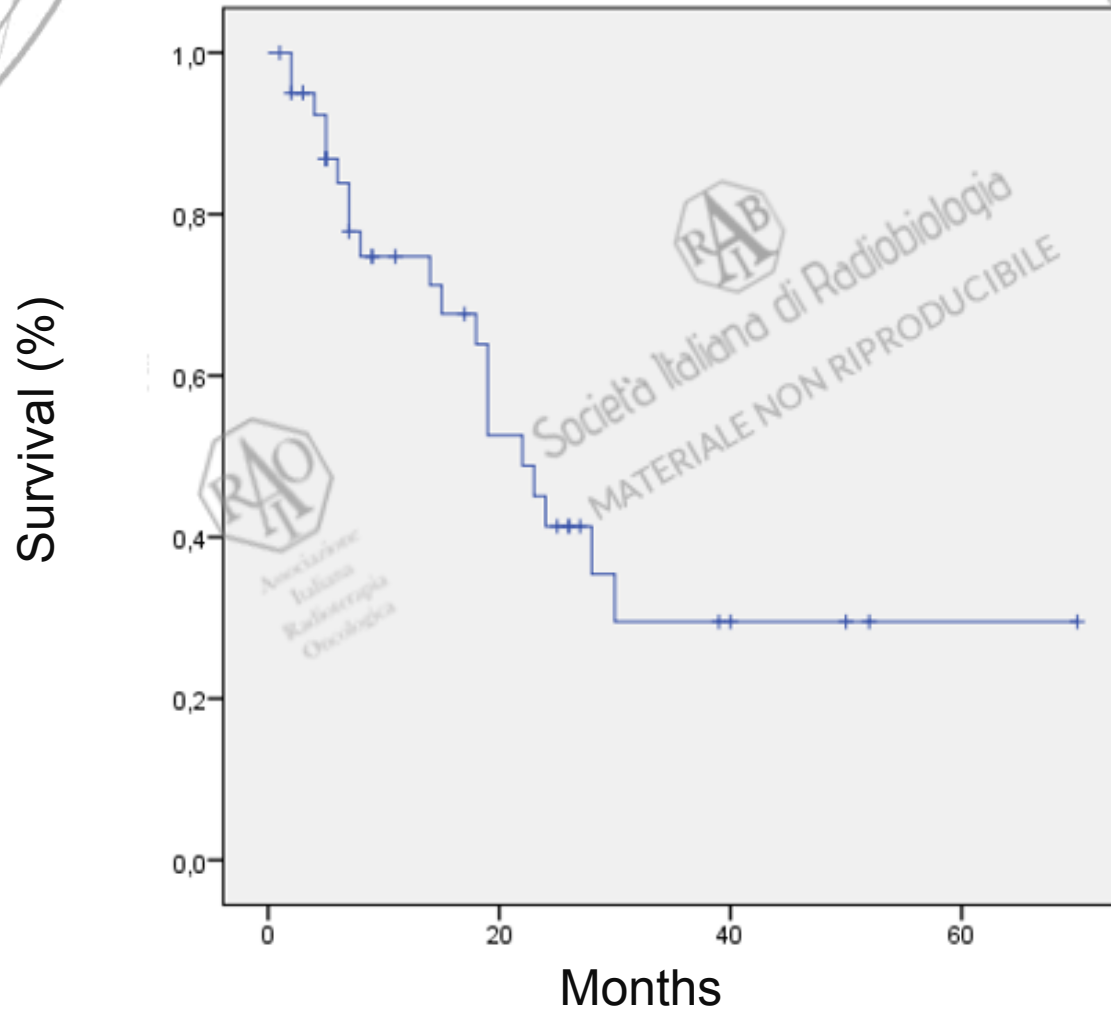

10 pts second SBRT

# Oligoprogressive mCRPC: Results (2)

**Second-line-FS**

Median Follow-up= 23,43 months

2 <sup>nd</sup> line-FS (median)	22 ms
1 yr	74,8%
2yrs	41,3%
3yrs	29,5%

# Oligorecurrent HSPC: Results (3): univariate analysis

## Prognostic factors:

- D'Amico Risks
- Gleason Score
- Primary site of mts
- n° of mts
- Time to castrate resistant
- Pre-SBRT PSA value
- BED

# Conclusions

- ✓ SBRT is a safe and feasible treatment
- ✓ SBRT in oligorecurrent and oligoprogressive prostate cancer delay systemic therapies for about two years without toxicity
- ✓ Low PSA-DT is correlated with a worse ADT-FS
- ✓ Our results are similar to those present in literature

## Future Development:

- Prospective trials are needed
- Role of concomitant ADT? Role of prophylactic nodal RT?
- Combination with new hormonal therapy (Abiraterone, Enzalutamide)?
