# Rituximab and reduced dose R-miniCHOP for patients aged over 80 with DLBCL

Groupe d'Etude Des Lymphomes De l'Adulte (GELA)  
Study LNH03-7B

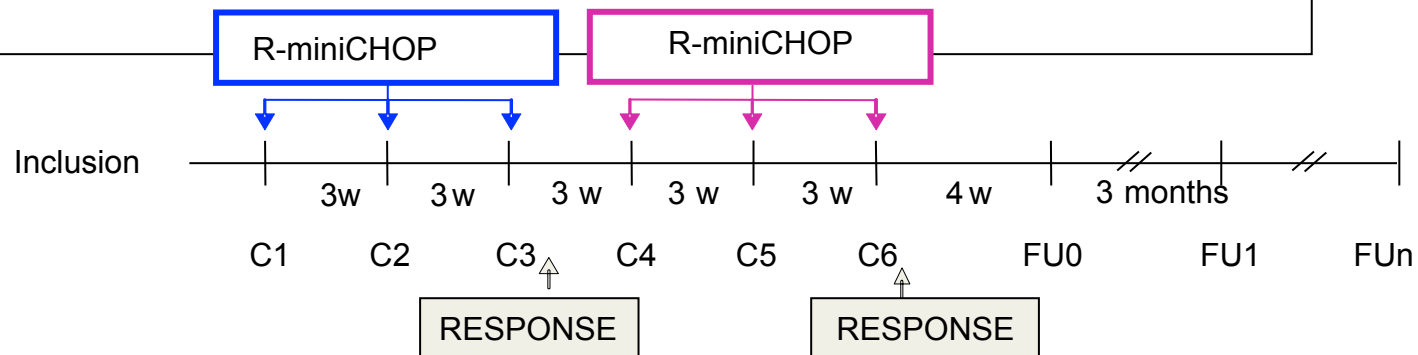

Frédéric Peyrade, Fabrice Jardin, Christian Gisselbrecht, Antoine Thyss, Jean François Emile,  
Sylvie Castaigne, Bertrand Coiffier, Corinne Haioun, Serge Bologna, Olivier Fitoussi,  
Gérard Lepeu, Christophe Fruchart, Dominique Bordessoule, Michel Blanc, Richard Delarue,  
Maud Janvier, Bruno Salles, Andre Bosly, and Hervé Tilly

# Treatment

R-miniCHOP	Dose	D1	D2	D3	D4	D5
Prednisone	40 mg/m <sup>2</sup>	X	X	X	X	X
Rituximab	375 mg/m <sup>2</sup>	X				
Doxorubicin	25 mg/m <sup>2</sup>	X				
Cyclophosphamide	400 mg/m <sup>2</sup>	X				
Vincristine	1 mg DT	X				

Primary endpoint: overall survival

# Primary endpoint: Overall survival

## Intent-to-treat population

No. of Subjects	Event	Censored	Median Survival (95% CL)
149	39% (58)	61% (91)	29.14 ( 21.22 NA )

# Conclusions

---

- **R-miniCHOP : adapted regimen for DLBCL patients older 80 years**
- **Acceptable toxicity, but first treatment cycles represent a crucial period**
- **59% patients are alive at two years**
- **Less toxicity with perphase treatment\***

- Lenalidomide
- BTK inhibitors (Ibrutinib)
- PI3K inhibitors
- Bcl-2 inhibitors
- Combos (PPM + BTK-I + mTor-I)
- **BARs**

# *Towards the Cure of DLBCL*

## *The future:*

- [ Vitamin D substitution: „DR.CHOP“ ]
- BTK inhibitors (Ibrutinib)
- PI3K inhibitors
- Bcl-2 inhibitors
- Combos (PPM + BTK-I + mTor-I)
- BCR-Antigens for Reverse Targeting

# Forward vs. Reverse Targeting

## Forward Targeting

Antibody binds to Antigen, e. g. CD20

# Forward vs. Reverse Targeting

## Forward Targeting

Antibody binds to Antigen, e. g. CD20

## Reverse Targeting

B-Cell Receptor Antigen binds to B-Cell Receptor

# Forward vs. Reverse Targeting

## Forward Targeting

Antibody binds to Antigen, e. g. CD20

## Reverse Targeting

B-Cell Receptor Antigen binds to B-Cell Receptor

# Forward vs. Reverse Targeting

## Forward Targeting

Antibody binds to Antigen, e. g. CD20

## Reverse Targeting

B-Cell Receptor Antigen (with Toxin)

binds to B-Cell Receptor

# Forward vs. Reverse Targeting

## Forward Targeting

Antibody binds to Antigen, e. g. CD20

## Reverse Targeting

B-Cell Receptor Antigen (with Toxin)

binds to B-Cell Receptor

# Clinical Relevance of BCR Antigens

---

## Homburg BARs identified (25.03.15):

- 30-50% of MGUS/MM (2 antigens, 1 epitope)
- 30% of CLL (diverse,  $\geq 2$  epitopes each)
- 25% of FL (1 antigen, 1 epitope)
- 66% of all PCNSL (1 antigen, 1 epitope)
- 60% all ABC-DLBCL (1 antigen, 1 epitope)
- 45% of all MCL (1 antigen, 1 epitope)
- 90% of IgD-NLPHL (*Moraxella catarrhalis*)

# Specific Killing of ARS2-pos ABC-DLBCL by BAR-Toxins (Pseudomonas Exotoxin)

# Growth of heterotransplanted ARS2-pos. OCI-LY3 in SCID mice

**BARs: A new dimension in the  
treatment for a broad spectrum of  
various B-cell malignancies**

**o r :**

**„Personalized and Precision  
Medicine at the Limits“**

***Thank you !***
