# Nuclear Pore Complex

Tan Cancer Discovery 2014

Responsible for protein traffic  
between cell nucleus and  
cytoplasm  
XPO1 and RanGTP

Cancer targets undergoing  
XPO1 mediated nuclear  
export include:

p53, APC, ATF2, BCR-ABL,  
BOK, BRCA1, CIP2A, p21,  
p27, ERK, ER-a, FOXO1,  
FOXO3A, FOXO4, FOXO6,  
Galectin-3, HSP90,  
In1/hSNF5, NF2NPM, N-  
WASP/FAK, RASSF2, RB1,  
RUNX3, survivin, ErbB-2,  
Topo1, Topo2A, VDUP1,  
WEE1

## Selinexor: First-in-Class, Oral Selective Inhibitor of Nuclear Export (SINE) Compound

- Novel, small molecule selective inhibitor of XPO1
- Oral drug given 1-2 times per week (PDn  $t_{1/2}$  ~48 hrs)
- No known drug-drug interactions
  - None through CYP450s or other enzymes
  - No effect on QTc intervals
- Potent anti-myeloma, lymphoma and leukemia effects in preclinical models
- Over 2450 patients dosed alone or in combination
- Randomized Phase II/III studies ongoing in advanced hematologic and solid tumors

# Study Design: NCT01607892

## DOSE ESCALATION

**Non-Hodgkin's  
Lymphoma (NHL)**

Multiple Myeloma (MM)

Acute Myeloid Leukemia (AML)

## DOSE EXPANSION

**DLBCL 35 mg/m<sup>2</sup> (~60 mg)  
DLBCL 60 mg/m<sup>2</sup> (~100 mg)  
T-Cell Lymphomas 40 mg/m<sup>2</sup> (~68 mg)**

MM 35 mg/m<sup>2</sup> (~60 mg)  
MM 45 (60) mg/m<sup>2</sup> (~77 (102) mg) + Low Dose Dex

AML 40 mg/m<sup>2</sup> (~68 mg)

# Treatment and Key Inclusion

- Treatment Scheme
  - Selinexor dosing 10 doses/cycle (2-3 doses/week) or 8 doses/cycle (twice weekly) or 4 doses/cycle (once weekly)
- Doses
  - 3 mg/m<sup>2</sup> – 80 mg/m<sup>2</sup> (~ 5 mg – 136 mg)
- Main Inclusion Criteria
  - Patients ≥18 years old, ECOG performance status 0-1, no available standard treatments
  - ANC >1000/μL, Platelets >30,000/μL
  - Documented disease progression at study entry

# Phase 1: Selinexor in R/R NHL to assess safety and determine RP2D

43 R/R DLBCL patients enrolled (79 NHL)

Median age 60 years (range 30-82)

Median of 3 prior therapies (range 2-11)

28% refractory to last therapy, 30% had prior auto SCT

Dose escalation 3-80 mg/m<sup>2</sup> in 21 or 28 day cycles

Dose expansion 35-60 mg/m<sup>2</sup>; 30 or 60 mg flat

Most common grade 3-4 events:

Thrombocytopenia (47%)

Neutropenia (32%)

Leukopenia (16%)

Fatigue (11%)

Hyponatremia (10%)

**RP2D = 60 mg**

## Weight Change During Cycles 1-2

Kuruvilla, Blood 2017

# Phase 1 Selinexor in R/R NHL: Waterfall

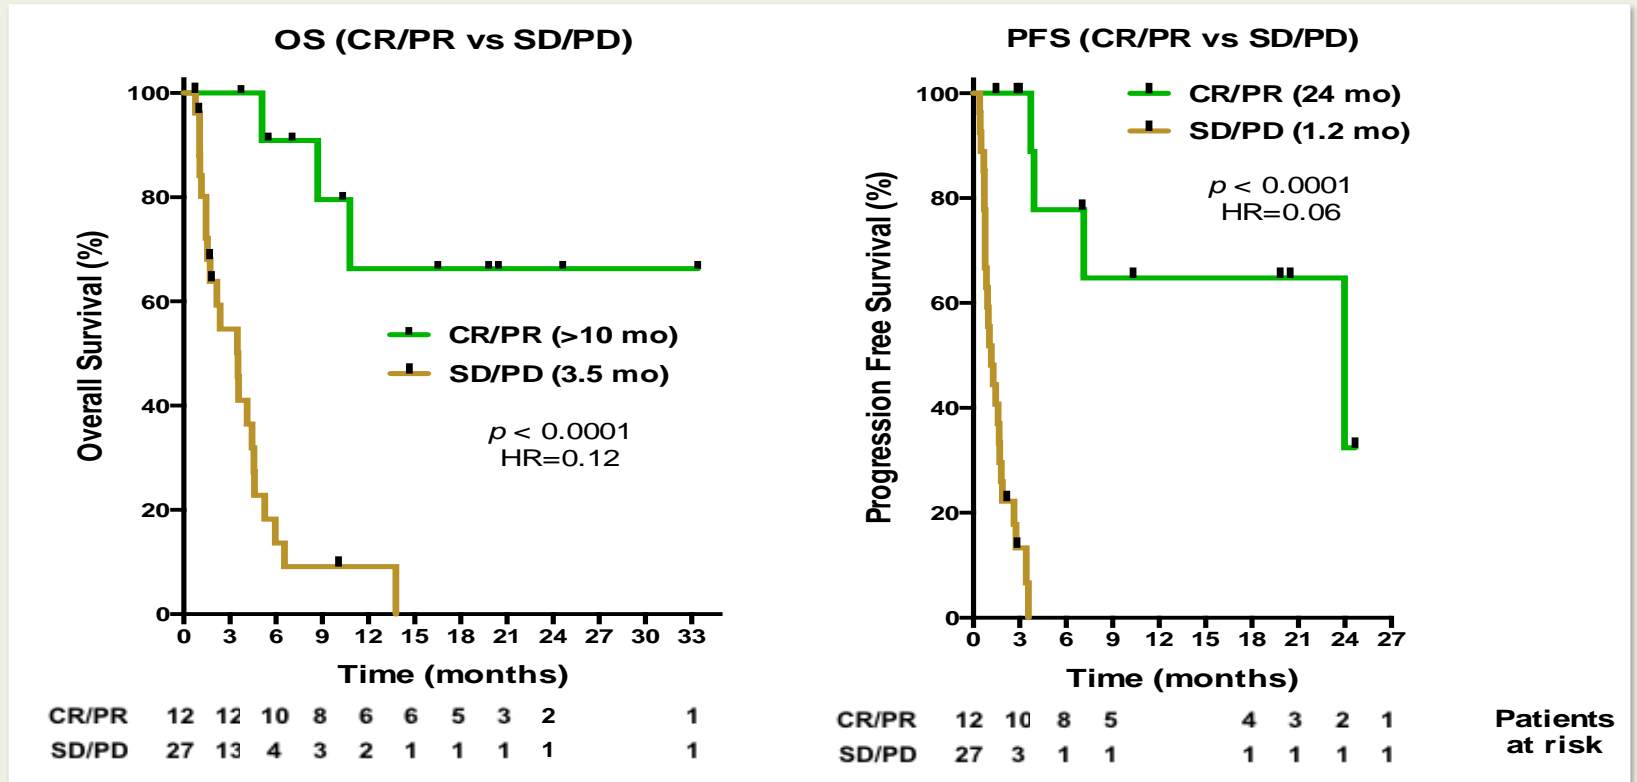

Kuruvilla, Blood 2017

# DLBCL Responses were Durable

Garzon et al., EHA 2015

# SADAL<sup>1</sup>: A Phase 2b Study In DLBCL(Pv7)-Ongoing

N≈130

## Relapsed or Refractory or Transformed DLBCL

- For patients who have received two-to-five prior therapies, who are not currently eligible for hematopoietic stem cell transplantation
- For patients with ≥PR on last prior therapy, 60 days from end of last therapy; otherwise ≥14 weeks from end of most recent systemic therapy

## Stratifications

- DLBCL Sub-type (GCB vs non-GCB)
- International Prognostic Index Score

Oral

Selinexor

Selinexor twice weekly  
4-week cycle

60  
mg

Top-line data  
expected by end 2018

Ongoing open-label clinical trial evaluating selinexor in patients with relapsed or refractory (≥3rd line) DLBCL; at least 50% of patients with GCB-DLBCL

<sup>1</sup> Selinexor Against Diffuse Aggressive Lymphoma

# SADAL: Baseline Patient Characteristics (PV6 ≥14 weeks from last treatment)

A randomized Phase 2B study investigating 60 mg vs.100mg single agent oral selinexor in patients with relapsed or refractory diffuse large B-Cell lymphoma (DLBCL) who are not candidates for transplantation

|  | 60 mg                   | 100 mg                  |

<sup>†</sup>Responses were adjudicated according to the Lugano Classification (*Cheson, 2014*) by an independent central radiological review committee. ORR=Overall Response Rate (CR+PR), CR=Complete Response, PR=Partial Response, SD=Stable Disease, PD=Progressive Disease, NE=Non-evaluable. Responses are based on interim unaudited data as of May 15, 2017 for the first 63 patients (of 90 total patients).

**Overall response rate as determined by an independent central radiological review**

Maerevoet, et al EHA 2017

# Efficacy: ORR Subgroups

Maerevoet, et al EHA 2017

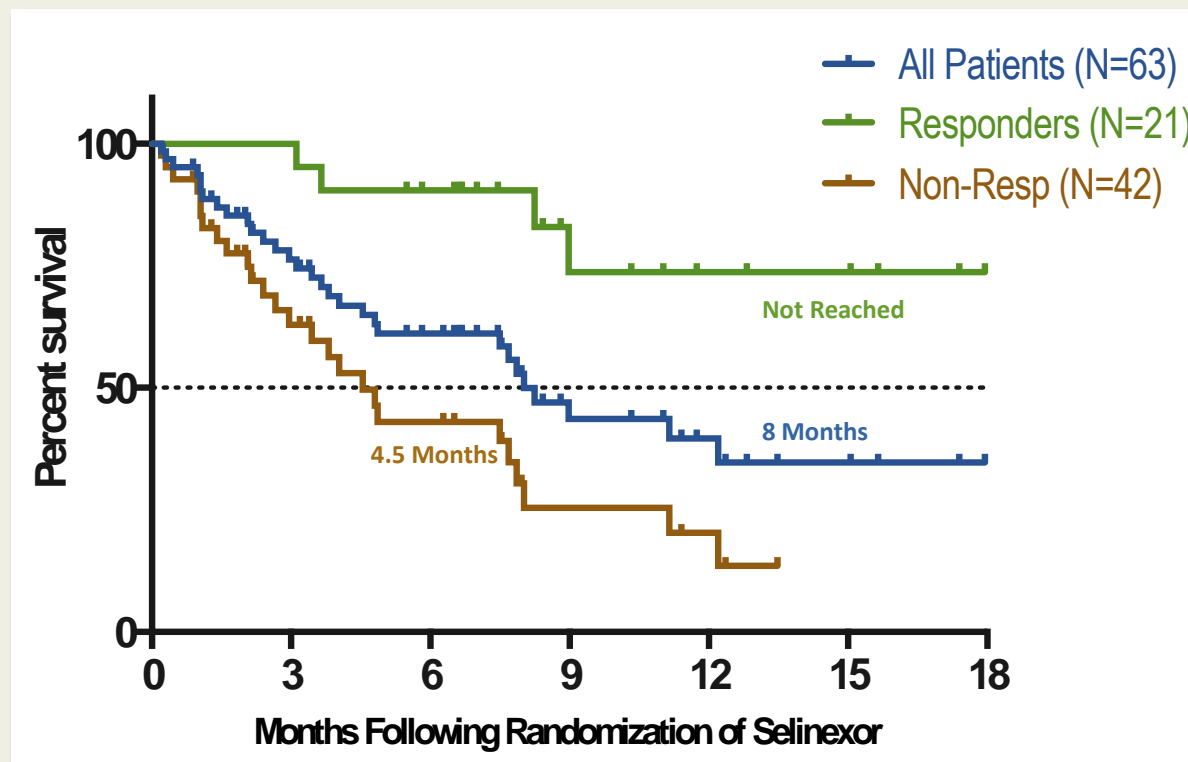

# Responders (N=21): Response Onset & Time on Treatment

Among 21 responders, the median time on treatment was 9 months (median DOR >7 months, with a FUP of 13 months) 9 responders remain on treatment including 6 patients in CR; as of March, 2018, several patients have remained on study >24 months

# SADAL Efficacy: Overall Survival

## Causes of Treatment Discontinuation (N=46)

|                        | 60 mg (N=46) |
|------------------------|--------------|
| Patients Off Treatment | 34 (74%)     |
| Progressive Disease    | 21 (62%)     |
| Toxicity               | 6 (18%)      |
| Death                  | 4 (12%)      |
| Other                  | 3 (9%)       |
| Median Dose Received   | 51 mg        |

Maerevoet, et al EHA 2017

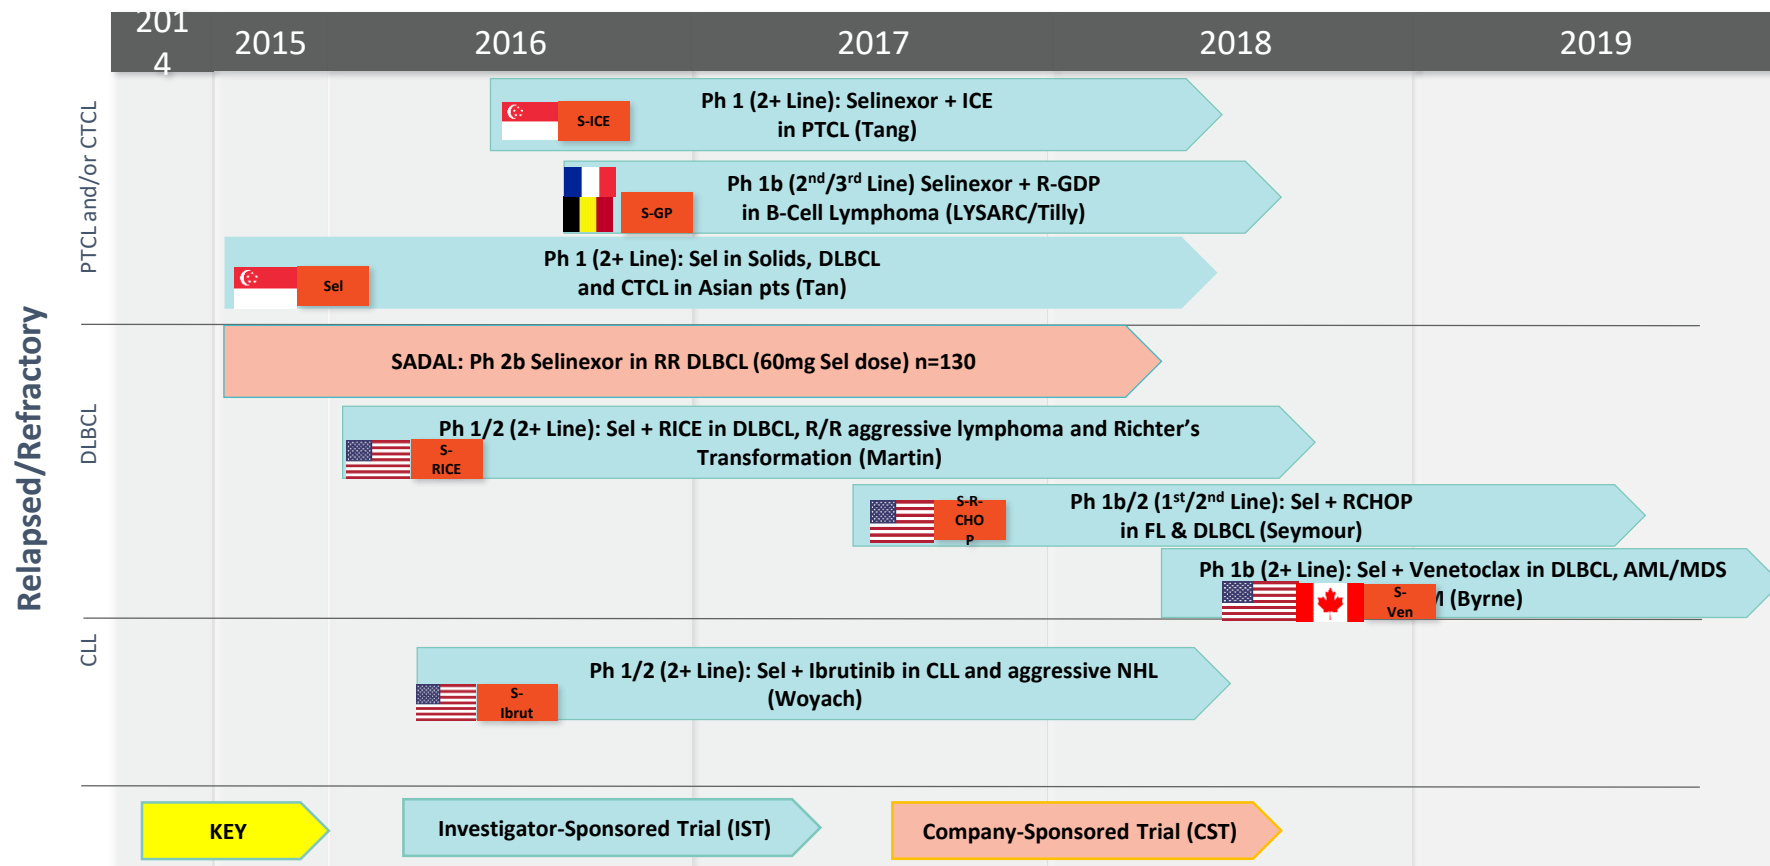

# Selinexor – current single agent DLBCL data

- ORR: approximately 35%
  - Activity in both GCB and non-GCB
- Toxicity
  - Grade 3-4 thrombocytopenia 28%
  - Grade 3-4 neutropenia: 17%
  - Grade 3-4 anemia 15%
  - Grade 3-4 fatigue/asthenia: 11%
  - Grade 1-2 GI tox 40%
  - Grade 3-4 nausea 6.5%

# Conclusions from Available Data

- Selinexor has single agent activity in DLBCL
  - Independent of cell of origin
  - Responses seen in poor risk populations
  - No predictive biomarker
- SADAL trial confirms data from phase 1 suggesting 60 mg is optimal dose as monotherapy
- Toxicity is reasonable and can be managed with routine supportive care
- Anti-cancer mechanism in lymphoma unclear
  - Makes rational combination challenging – pre-clinical data with chemotherapy, proteasome inhibitors, BCL2 inhibitor, BTK inhibitor as examples

# Selinexor Clinical Development in NHL

# Summary – Selinexor in Lymphoma

- Single agent activity demonstrated with reasonable toxicity
  - No biomarker identified for enrichment
  - Mechanism remains unclear
  - Clearest signal in DLBCL
  - Potential activity in other lymphoma subtypes not well explored
  - Combinations possible
- Development plan
  - DLBCL: Confirmatory RCT design undecided
  - Optimal place unclear
  - Other diseases?
